

Electrical Installation Condition Report

Requirements for Electrical Installations - BS 7671:2018+A2:2022 (IET Wiring Regulations 18th Edition)

Guidance for recipients:

This report is an important and valuable document which should be retained for future reference.

- 1. The purpose of this Report is to confirm, so far as reasonably practicable, whether or not the electrical installation is in a satisfactory condition for continued service (see Section E). The Report should identify any damage, deterioration, defects and/or conditions which may limitations of this inspection, be fully identified. Such give rise to danger (see Section K).
- 2. This Report is only valid if accompanied by the Inspection Schedule(s) and the Schedule(s) of Circuit Details and Test Results.
- 3. The person ordering the Report should have received the original Report and the inspector should have retained a duplicate.
- 4. The original Report should be retained in a safe place and be made available to any person inspecting or undertaking work on the electrical installation in the future. If the property is vacated, this Report will provide the new owner / occupier with details of the condition of the electrical installation at the time the Report was issued.
- 5. Section D (Extent and Limitations) should identify fully the extent of the installation covered by this Report and any limitations on the inspection and testing. The inspector should have agreed these aspects with the person ordering the Report and with other interested parties (licensing authority, insurance company, mortgage provider and the like) before the inspection was carried out.
- 6. Some operational limitations such as inability to gain access to parts of the installation or an item of equipment may have been encountered during the inspection. The inspector should have noted these in Section D.
- 7. For items classified in Section K as C1 ("Danger Present"), the safety of those using the installation is at confirm it is in operational condition in accordance with risk, and it is recommended that a skilled person or persons competent in electrical installation work undertakes the necessary remedial work immediately.
- 8. For items classified in Section K as C2 ("Potentially Dangerous"), the safety of those using the installation may be at risk and it is recommended that a skilled person or persons competent in electrical installation work undertakes the necessary remedial work as a matter of urgency.

- 9. Where it has been stated in Section K that an observation requires further investigation code FI the inspection has revealed an apparent deficiency which may result in a code C1 or C2 could not, due to the extent or observations should be investigated as soon as possible. A further examination of the installation will be necessary, to determine the nature and extent of the apparent deficiency (see Section F).
- 10. For safety reasons, the electrical installation should be re-inspected at appropriate intervals by a skilled person or persons competent in such work. The recommended date by which the next inspection is due is stated in Section F of the Report under 'Recommendations' and on a label at or near to the consumer unit /distribution board (where required).
- 11. Where the installation includes a residual current device (RCD) it should be tested six-monthly by pressing the button marked 'T' or 'Test'. The device should switch off the supply and should then be switched on to restore the supply. If the device does not switch off the supply when the button is pressed, seek expert advice. For safety reasons it is important that this instruction is followed.
- 12. Where the installation includes an arc fault detection device (AFDD) having a manual test facility it should be tested six-monthly by pressing the test button. Where an AFDD has both a test button and automatic test function, manufacturer's instructions shall be followed with respect to test button operation.
- 13. Where the installation includes a surge protective device (SPD) the status indicator should be checked to manufacturer's information. If the indication shows that the device is not operational, seek expert advice. For safety reasons it is important that this instruction is followed.
- 14. Where the installation includes alternative or additional sources of supply, warning notices should be found at the origin or meter position or, if remote from the origin, at the consumer unit or distribution board and at all points of isolation of all sources of supply.

| 1.1.3 | Meter tails | |
| 1.1.4 | Metering equipment | |
| 1.1.5 | Isolator (where present) | N/A |
| 1.1.6 | Person ordering work/dutyholder notified (Delete as appropriate) NOTE 1 Where inadequacies in the intake equipment are encountered, which may result in a dangerous or potentially dangerous situation, the person ordering the work and/or dutyholder must be informed. It is strongly recommended that the person ordering the work informs the appropriate authority. NOTE 2 For this section only, where inadequacies are found, an X should be put against the appropriate item and a comment made in Section K | |
| 1.2 | Consumer's Isolator (where present) | NA NA |
| 1.3 | Consumer's meter tails | |
| | ce of adequate arrangements for other sources such as microgenerators (551.6; 551.7) | |
| 2.1 | Presence of adequate arrangements where generator to operate as a switched alternative (551.6) | N/A |
| 2.2 | Adequate arrangements where a generating set operates in parallel with the public supply (551.7) | N/A |
| | ING / BONDING ARRANGEMENTS (411.3; Chap 54) | |
| 3.1 | Presence and condition of distributor's earthing arrangements (542.1.2.1: 542.1.2.2) | |
| 3.2 | Presence and condition of earth electrode connection where applicable (542.1.2.3) | NA. |
| 3.3 | Provision of earthing/bonding labels at all appropriate locations (514.13.1) | |
| 3.4 | Confirmation of earthing conductor size (542.3; 543.1.1) | |
| 3.5 | Accessibility and condition of earthing conductor at MET arrangement (543.3.2) | |
| 3.6 | Confirmation of main protective bonding conductor sizes (544.1) | |
| 3.7 | Condition and accessibility of main protective bonding conductor connections (543.3.2; 544.1.2) | V |
| 3.8 | Accessibility and condition of other protective bonding connections (543.3.1: 543.3.2) | |
| | MER UNIT(S) / DISTRIBUTION BOARD(S) | |
| 4.1 | Adequacy of working space/accessibility to consumer unit/distribution board (132.12; 513.1) | |
| 4.2 | Security of fixing (134.1.1) | |
| 4.3 | Condition of enclosure(s) in terms of IP rating etc (416.2) | |
| 4.4 | Condition of enclosure(s) in terms of fire rating etc (421.1.201; 526.5) | G |
| 4.5 | Enclosure not damaged/deteriorated so as to impair safety (651.2) | |
| 4.6 | Presence of main linked switch (as required by 462.1.201) | |
| 4.7 | Operation of main switch(es) (functional check) (643.10) | |
| 4.8 | Manual operation of circuit-breakers and RCDs and AFDDs to prove functionality (643.10) | |
| 4.9 | Correct identification of circuit details and protective devices (514.8.1; 514.9.1) | |
| 4.10 | Presence of RCD six-monthly test notice at or near consumer unit/distribution board, where required (514.12.2) | |
| 4.11 | Presence of alternative supply warning notice at or near consumer unit/distribution board (514.15) | NA NA |
| 4.12 | Presence of of other required labelling (please specify) (Section 514) | N/A |
| 4.13 | Compatibility of protective devices, bases and other components; correct type and rating, (No signs of unacceptable thermal damage, arcing or overheating) (411.4; 411.5; 411.6; Sections 432,433) | |
| 4.14 | Single-pole switching or protective devices in line conductor only (132.14.1; 530.3.3) | |
| 4.15 | Protection against mechanical damage where cables enter consumer unit/distribution board (522.8.1; 522.8.5; 522.8.11) | |
| 4.16 | Protection against electromagnetic effects where cables enter consumer unit/distribution board/enclosures (521.5.1) | N/A |
| 4.17 | RCD(s) provided for fault protection -includes RCBO(s) (411.4.204; 411.5.2; 531.2) | |
| 4.18 | RCD(s) provided for additional protection/requirements - includes RCBO(s) (411.3.3; 415.1) | |
| 4.19 | Confirmation of indication that SPD is functional (651.4) | N/A |
| 4.20 | Confirmation that ALL conductor connections, including connections to busbars, are correctly located in terminals and are tight and secure (526.1) | |
| 4.21 | Adequate arrangements where a generating set operates as a switched alternative to the public supply (551.6) | NA NA |
| 4.22 | Adequate arrangements where a generating set operates in parallel with the public supply (551.7) | (N/A |
| | CIRCUITS | |
| 5.1 | Identification of conductors (514.3.1) | |
| 5.2 | Cables correctly supported throughout their run (521.10.202; 522.8.5) | |

^{*} SPD Type. Where a combined T1 + T2 or T2 + T3 device is installed, indicate by ticking both boxes.
t Where a T3 SPD is installed to protect sensitive equipment, enter Details of Circuits, of the Schedule of Test Results. (See Section 534 of BS 7671:2018+A2:2022.)
j: See Table 4A2 of Appendix 4 of BS 7671:2018+A2:2022.
§ Where the maximum permitted earth fault loop impedance value stated in Max Zs column is taken from a source other than the tabulated values given in Chapter 41 of BS 7671:2018+A2:2022, state the source of the data in the appropriate cell for the circuit in the change to Schedule of Test Results
