

ELECTRICAL INSTALLATION CONDITION REPORT REPORT No: EICR-20240902163607

This report documents an accurate assessment of the condition of the electrical installation and whether it is fit for continued service in accordance with BS7671:2018+A2:2022 (18th Edition)

34 Fulford Place, Hospital Fields Rd York North Yorkshire YO10 4OE

The following work was carried out at the address above

100% of the fixed wire installation and 20% visual inspection of accessories.

And was deemed to be:

SATISFACTORY

Company issuing this Report

DGB Electrical 7 Welham Road Norton North Yorkshire YO17 9DP dgbelectrical@outlook.com CPS Enrolment No: 75773

Item No	DESCRIPTION	OUTCOME See codes above
cont'o	CONSUMER UNIT(S) / DISTRIBUTION BOARD(S)	
4.13	Compatibility of protective devices, bases and other components, correct type and rating (No signs of unacceptable thermal damage, arcing or overheating) (411.3.2; 411.4; 411.5; 411.6; Sections 432, 433)	
4.14	Single-pole switching or protective devices in line conductor only (132.14.1; 530.3.3)	
4.15	Protection against mechanical damage where cables enter consumer unit/distribution board (132.14.1; 522.8.1; 522.8.5; 522.8.11)	Ø
4.16	Protection against electromagnetic effects where cables enter consumer unit/distribution board/enclosures (521.5.1)	
4.17	RCD(s) provided for fault protection - includes RCBOs (411.4.204; 411.5.2; 531.2)	0
4.18	RCD(s) provided for additional protection / requirements - includes RCBOs (411.3.3; 415.1)	Ø
4.19	Confirmation of indication that SPD is functional (651.4)	Ø
4.20	Confirmation that ALL conductor connections, including connections to busbars, are correctly located in terminals and are tight and secure (526.1)	•
4.21	Adequate arrangements where a generating set operates as a switched alternative to the public supply (551.6)	N/A
4.22	Adequate arrangements where a generating set operates in parallel with the public supply (551.7)	N/A
5.0	FINAL CIRCUITS	
5.1	Identification of conductors (514.3.1)	Ø
5.2	Cables correctly supported throughout their run (521.10.202; 522.8.5)	LIM
5.3	Condition of insulation of live parts (416.1)	•
5.4	Non sheathed cables protected by enclosure in conduit, ducting or trunking (521.10.1) * To include the integrity of conduit and trunking systems (metallic and plastic)	0
5.4.1	To include the integrity of conduit and trunking systems (metal and plastic) * To include the integrity of conduit and trunking systems (metallic and plastic)	Ø
5.5	Adequacy of cables for current carrying capacity with regard for the type and nature of installation (Section 523)	
5.6	Coordination between conductors and overload protective devices (433.1; 533.2.1)	•
5.7	Adequacy of protective devices: type and rated current for fault protection (411.3)	0
5.8	Presence and adequacy of circuit protective conductors (411.3.1; Section 543)	•
5.9	Wiring system(s) appropriate for the type and nature of the installation and external influences (Section 522)	Ø
5.10	Concealed cables installed in prescribed zones (see Extent and limitations) (522.6.202)	III
5.11	Cables concealed under floors, above ceilings or in walls/partitions, adequately protected against damage (see Extent and limitations) (522.6.204;)	0
5.12	Provision of additional requirements for protection by RCD not exceeding 30 mA	
	* for all socket outlets of rating 32A or less, unless an exception is permitted (411.3.3)	Ø
	* for supply to mobile equipment not exceeding 32A rating for use outdoors (411.3.3)	Ø
	* for cables concealed in walls at a depth of less than 50mm (522.6.202; 522.6.203)	0
	* for cables concealed in walls/partitions containing metal parts regardless of depth (522.6.203)	Ø
	* for final circuits supplying luminaires within domestic (household) premises (411.3.4)	Ø

Item No	DESCRIPTION								
5.13	Provision of fire barriers, sealing arrangements and protection against thermal effects (Section 527)	LIM							
5.14	Band II cables segregated/separated from Band I cables (528.1)								
5.15	Cables segregated/separated from communications cabling (528.2)	I M							
5.16	Cables segregated/separated from non-electrical services (528.3)	(M)							
5.17	Termination of cables at enclosures - indicate extent of sampling in Extent of Limitations of the report (Section 526)								
	* Connections soundly made and under no undue strain (526.6)	0							
	* No basic insulation of a conductor visible outside enclosure (526.8)	0							
	* Connections of live conductors adequately enclosed (526.5)	•							
	* Adequately connected at point of entry to enclosure (glands, bushes etc.) (522.8.5)	Ø							
5.18	Condition of accessories including socket-outlets, switches and joint boxes (621.2 (v))								
5.19	Suitability of accessories for external influences (512.2)								
5.20	Adequacy of working space/accessibility to equipment (132.12; 513.1)	0							
5.21	Single-pole switching or protective devices in line conductors only (132.14.1; 530.3.3)								
6.0	LOCATION(S) CONTAINING A BATH OR SHOWER								
6.1	Additional protection for all low voltage (LV) circuits by RCD not exceeding 30mA (704.411.3.3)								
6.2	Where used as a protective measure, requirements for SELV or PELV met (701.414.4.5)								
6.3	Shaver sockets comply with BS EN 61558-2-5 formerly BS 3535 (701.512.3)	N/A							
6.4	Presence of supplementary bonding conductors, unless not required by BS 7671:2018 (701.415.2)	N/A							
6.5	Low voltage (e.g. 230 volt) socket-outlets sited at least 2.5m from zone (701.512.3)	N/A							
6.6	Suitability of equipment for external influences for installed location in terms of IP rating (701.512.2)	0							
6.7	Suitability of accessories and control-gear etc. for a particular zone (701.512.3)	0							
6.8	Suitability of current using equipment for particular position within the location (701.55)	4

CONDITION REPORT GUIDANCE FOR RECIPIENTS

This report is an important and valuable document which should be retained for future reference.

- 1. The purpose of this Report is to confirm, as far as reasonably practicable, whether or not the electrical installation is in a satisfactory condition for continued service (see SUMMARY OF THE CONDITION OF THE INSTALLATION). The Report should identify any damage, deterioration, defects, and / or conditions which may give rise to danger (see OBSERVATIONS AND RECOMMENDATIONS).
- 2. This Report is only valid if accompanied by the Inspection Schedule(s) and the Schedule(s) of Circuit Details and Test Results.
- 3. The person ordering the Report should have received this Report without watermarks and the inspector / company should have retained a duplicate.
- 4. This Report should be retained in a safe place and be made available to any person inspecting or undertaking work on the electrical installation in the future. If the property is vacated, this Report will provide the new owner / occupier with details of the condition of the electrical installation at the time the Report was issued.
- 5. The EXTENT AND LIMITATIONS section should identify fully the extent of the installation covered by this Report and any limitations on the inspection and testing. The inspector should have agreed these aspects with the person ordering the Report and with other interested parties (licensing authority, insurance company, mortgage provider and the like) before the inspection was carried out.
- Some operational limitations such as inability to gain access to parts of the installation or an item of equipment may have been encountered during the inspection. The inspector should have noted these in the EXTENT AND LIMITATIONS section.
- 7. For items classified in the OBSERVATIONS AND RECOMMENDATIONS section as C1 ("Danger present"), the safety of those using the installation is at risk, and it is recommended that a skilled person or persons competent in electrical installation work undertakes the necessary remedial work immediately.
- For items classified in the OBSERVATIONS AND RECOMMENDATIONS section as C2 ("Potentially dangerous"), the safety of those using
 the installation may be at risk, and it is recommended that a skilled person or persons competent in electrical installation work
 undertakes the necessary remedial work as a matter of urgency.
- Where it has been stated in the OBSERVATIONS AND RECOMMENDATIONS section that an observation requires further investigation (Code
 FI) the inspection has revealed an apparent deficiency which may result in a Code C1 or C2, and could not, due to the extent or limitations
 of the inspection, be fully identified. Such observations should be investigated without delay. A further examination of the installation will
 be necessary, to determine the nature and extent of the apparent deficiency, (see SUMMARY OF THE CONDITION OF THE INSTALLATION)).
- 10. For safety reasons, the electrical installation should be re-inspected at appropriate intervals by a skilled person or persons, competent in such work. The recommended date by which the next inspection is due can be found in the DECLARATION section of the Report.
- 11. INTAKE EQUIPMENT (VISUAL INSPECTION ONLY) EXPLANATION OF CLASSIFICATION CODE X

An outcome against an item in this section, other than access to live parts, should NOT be used to determine the overall outcome.

NOTE 1: Where inadequacies in the intake equipment are encountered, which may result in a dangerous or potentially dangerous situation, the person ordering the work and / or duty holder must be informed. It is strongly recommended that the person ordering the work informs the appropriate authority.

- NOTE 2: For this section only, where inadequacies are found, an X should be put against the appropriate item and a comment made in the Observations and Recommendations section.
- 12. Where the installation includes a Residual Current Device (RCD) it should be tested 6 monthly by pressing the button marked 'T' or 'Test'. The device should switch off the supply and should then be switched on to restore the supply. If the device does not switch off the supply when the button is pressed, seek expert advice. For safety reasons it is important that this instruction is followed.
- 13. Where the installation includes an Arc Fault Detection Device (AFDD) having a manual test facility it should be tested 6 monthly by pressing the test button. Where an AFDD has both a test button and automatic test function, manufacturer's instructions shall be followed with respect to test button operation.
- 14. Where the installation includes a Surge Protective Device (SPD) the status indicator should be checked to confirm it is in operational condition in accordance with manufacturer's information. If the indication shows that the device is not operational, seek expert advice. For safety reasons it is important this safety instruction is followed.
- 15. Where the installation includes alternative or additional sources of supply warning notices should be found at the origin or meter position or, if remote from the origin, at the consumer unit or distribution board and at all points of isolation of all sources of supply.

	CODES FOR TYPE OF WIRING											
Α	В	С	D	E	F	G	н	O (Other)				
Thermoplastic insulated/sheathed cables	Thermoplastic cables in metallic conduit	Thermoplastic cables in non-metallic conduit	Thermoplastic cables in metallic trunking	Thermoplastic cables in non- metallic trunking	Thermoplastic / SWA cables	Thermosetting / SWA cables	MICC cables	Other cable types not listed here				
FP	TR	нт	SY	YY	CY	VIR						
FP 200 - standard fire resistant cable	Tri-rated - BS 6231 high temperature - flame retardant cable	Hi Tuff - waterproof with a tough PVC sheathing for outdoor use	SY cable - flexible instrumentation cable with a galvanised steel wire braid	YY cable - flexible instrumentation cable	CY cable - flexible instrumentation cable with a tinned copper wire braid and a PETP separator	VIR - Vulcanised Indian Rubber cable - no longer manufactured
