ABM Electrical Services Electrical Installation Condition Report

(Requirements for Electrical Installations – BS 7671 IET Wiring Regulations)
A. DETAILS OF THE CLIENT OR PERSON ORDERING THE WORK
Name: Mr D Cooke
Address: 41 Howe Hill Road, Holgate, York, YO26 4SL Email: N/A
B. REASON FOR PRODUCING THIS REPORT
Local Authority request
Date(s) inspection and testing carried out: 28/09/2020
C. DETAILS OF THE INSTALLATION WHICH IS THE SUBJECT OF THIS REPORT
Occupier: Students
Address: 9 Wigginton Road York YO31 8HG
Description of premises: ✓ Domestic N/A Commercial N/A Industrial N/A Other, please specify :
Estimated age of the wiring system Solve Years Solve Years Solve Years Evidence of additions or alterations Yes N/A No N/A No N/A Not apparent
Installation records available? Yes N/A No V Date of last inspection 22.09.2016 If yes, estimated age 1 Year years Alternative source of supply (as described in attached schedule if applicable) N/A
D. EXTENT AND LIMITATIONS OF INSPECTION AND TESTING The inspection and testing detailed in this report and accompanying schedules have been carried out in accordance with BS 7671 as amended
Extent of the electrical installation covered by this report 25% of installation (3.82 of GN 3)
Agreed limitations including the reasons, see Regulations 653.2
No lifting of floors
Limitations agreed with Mr D Cooke Position (if applicable) Owner
Operational limitations including the reasons
including the reasons It should be noted that cables concealed within trunking and conduits, under floors, in roof spaces, and generally within the fabric of the building or underground, have not been inspected.
It should be noted that cables concealed within trunking and conduits, under floors, in roof spaces, and generally within the fabric of the building or underground, have not been inspect unless specifically agreed between the client and inspector prior to the inspection. An inspection should be made within accessible roof space housing other electrical equipment.
It should be noted that cables concealed within trunking and conduits, under floors, in roof spaces, and generally within the fabric of the building or underground, have not been inspect unless specifically agreed between the client and inspector prior to the inspection. An inspection should be made within accessible roof space housing other electrical equipment. E. SUMMARY OF THE CONDITION OF THE INSTALLATION
It should be noted that cables concealed within trunking and conduits, under floors, in roof spaces, and generally within the fabric of the building or underground, have not been inspect unless specifically agreed between the client and inspector prior to the inspection. An inspection should be made within accessible roof space housing other electrical equipment. E. SUMMARY OF THE CONDITION OF THE INSTALLATION General condition of the installation (in terms of electrical safety)

An unsatisfactory assessment indicates that dangerous (code C1) and/or potentially dangerous (code C2) conditions have been identified

F. RECOMMENDATIONS

Where the overall assessment of the suitability of the installation for continued use on page 1 is stated as UNSATISFACTORY, I/we recommend that any observations classified as 'Danger present' (Code C1) or 'Potentially dangerous' (Code C2) are acted upon as a matter of urgency. Investigation without delay is recommended for observations identified as 'Further investigation required' (FI) Observations classified as 'improvement recommended' (Code C3) should be given due consideration.

Subject to the necessary remedial action being taken, I/we recommend that the installation is further inspected and tested by

28/09/2025

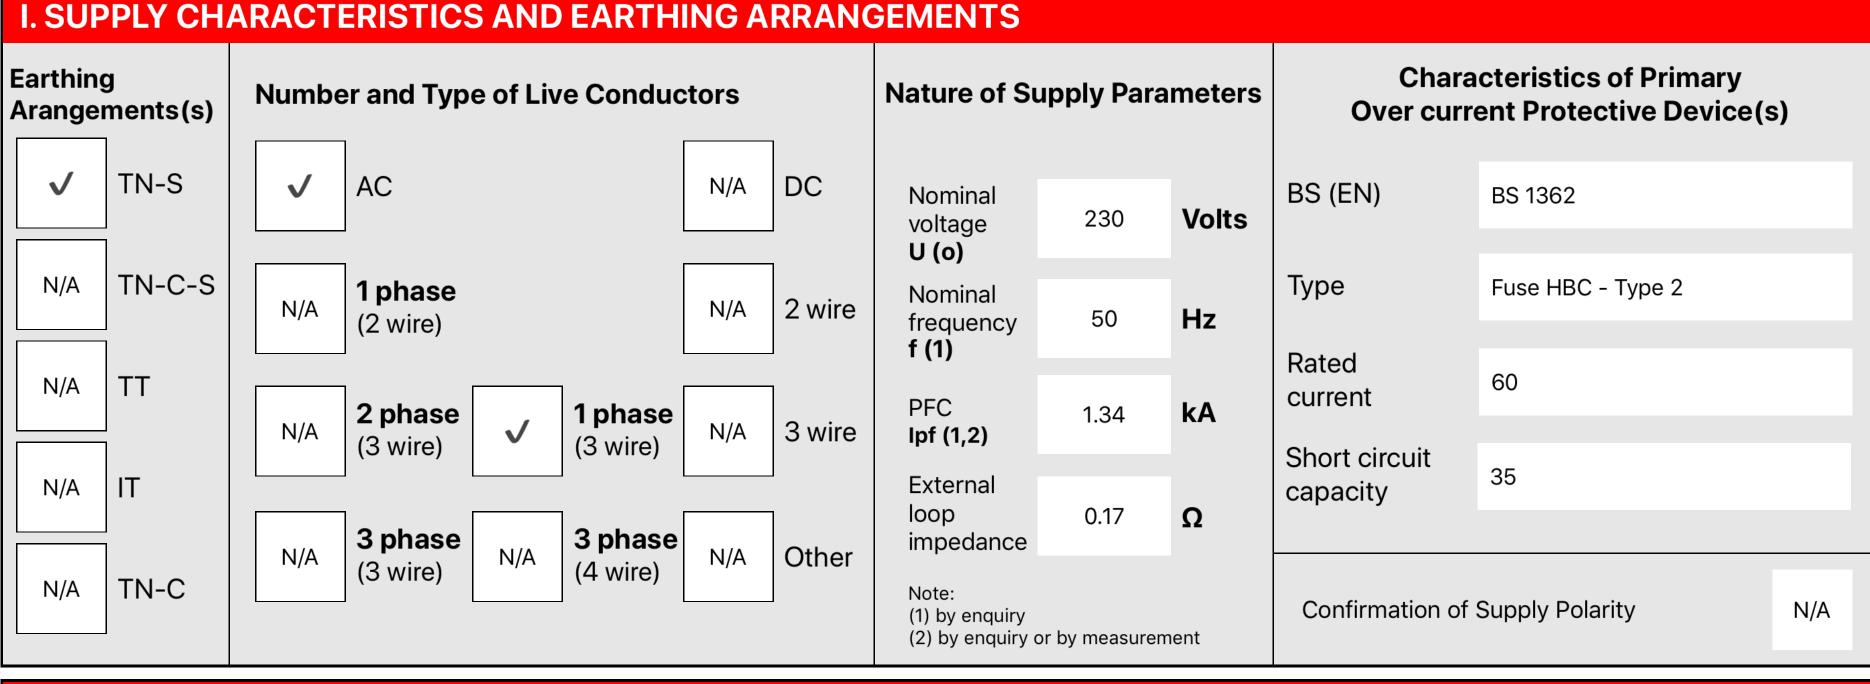

G. DECLARATION

ABM Electrical Services

I/We, being the person(s) responsible for the inspection and testing of the electrical installation (as indicated by my/our signature(s) below), particulars of which are described above, having exercised reasonable skill and care when carrying out the inspection and testing, hereby declare that the information in this report, including the observations and the attached schedules, provides an accurate assessment of the condition of the electrical installation taking into account the stated extent and limitations in section D of this report.

ITEM	DESCRIPTION	OUTCOME (Use codes above. Provide additional comment where appropriate. C1, C2, C3 and FI coded items to be recorded in Section K of the Condition Report)
1.0	DISTRIBUTOR'S / SUPPLY INTAKE EQUIPMENT (VISUAL INSPECTION ONLY)	
1.1	Condition of service cable	✓
1.2	Condition of service head	✓
1.3	Condition of distributor's earthing arrangement	✓
1.4	Condition of meter tails - Distributor/Consumer	✓
1.5	Condition of metering equipment	√
1.6	Condition of isolator (where present)	√
2.0	PRESENCE OF ADEQUATE ARRANGEMENTS FOR OTHER SOURCES SUCH AS MICROGENERATORS (551.6; 551.7)	N/A
3.0	EARTHING AND BONDING ARRANGEMENTS (411.3, Chapter 54)	
3.1	Presence and condition of distributor's earthing arrangement (542.1.2.1; 542.1.2.2)	✓
3.2	Presence and condition of earth electrode connection where applicable (542.1.2.3)	N/A
3.3	Provision of earthing/bonding labels at all appropriate locations (514.13)	✓
3.4	Adequacy of earthing conductor size (542.3, 543.1.1)	✓
3.5	Accessibility and condition of earthing conductor at MET (543.3.2)	✓
3.6	Adequacy of main protective bonding conductor sizes (544.1)	✓
3.7	Condition and accessibility of main protective bonding conductor connections (411.3.1.2; 543.3.2; 544.1.2)	✓
3.8	Accessibility and condition of other protective bonding connections (543.3.1; 543.3.2)	✓
4.0	CONSUMER UNIT OR DISTRIBUTION BOARD	
4.1	Adequacy of working space / accessibility to consumer unit / distribution board (132.12; 513.1)	✓
4.2	Security of fixing (134.1.1)	√
4.3	Condition of enclosure(s) in terms of IP rating etc (416.2)	√
4.4	Condition of enclosure(s) in terms of fire rating etc (421.1.201; 526.5)	√
4.5	Enclosure not damaged or deteriorated so as to impair safety (651.2)	✓
4.6	Presence of main linked switch (as required by 462.1.201)	✓
4.7	Operation of main switch - (functional check) (643.10)	✓
4.8	Manual operation of circuit breakers and RCDs to prove disconnection (643.10)	✓
4.9	Correct identification of circuit details and protective devices (514.8.1; 514.9.1)	√
	Presence of RCD six-monthly test notice at or near consumer unit/distribution board (514.12.2)	C3
4.11	Presence of non-standard (mixed) cable colour warning notice at or near consumer unit / distribution board (514.14)	C3
4.12	Presence of alternative supply warning notice at or near consumer unit / distribution board (514.15)	N/A
4.13	Presence of other required labelling (please specify) *** (Section 514)	N/A

Outcomes Acceptable University Unive	N. IN	SPECTION SCHEDULE FOR A DISTRIBUTION BOARD INSTALLATION		
Compatibility of protective devices, bases and other components; correct type and rating (No signs of unacceptable thermal damage, aroing or overheating) (411.3.2, 411.4; 411.5, 411.6; Sections 432, 433) 3ingle-pole switching or protective devices in line conductor only (132.14.1; 530.3.3) 4.18 Protection against electromagnetic effects where cables enter the consumer unit or distribution board (132.14.1; 522.8.1; 522.8.5; 522.8.1) 4.19 Protection against electromagnetic effects where cables enter the consumer unit or distribution board enclosures (521.5.1) 4.19 RCD(s) provided for fault protection includes RCB0 (411.4.204; 411.5.2; 531.2) 4.10 RCD(s) provided for fault protection includes RCB0 (411.4.204; 411.5.2; 531.2) 4.21 Again and a confirmation of indication that SPD is functional (651.4) 4.22 Adequate arrangements where a generating set operates as a switched alternative to the public supply (551.6) 5.2 Madequate arrangements where a generating set operates in parallel with the public supply (551.7) 5.3 HAL CIRCUITS 5.4 Confirmation of conductors (614.3.1) 5.5 Generatification of conductors (614.3.1) 5.6 Ondition of the insulation of live parts (416.1) 5.7 Machine in the insulation of live parts (416.1) 5.8 Generative supported throughout their run (521.10.202; 522.8.5) 5.9 Conditation between conductors and overload protective devices (433.1; 533.2.1) 5.9 Adequacy of rotective devices: type and rated current for fault protection (411.3) 5.9 Presence and adequacy of circuit protective conductors (411.3.1; Section 543) 5.9 Viring system(s) appropriate for the type and nature of installation 5.1 Concealed cables incorporating carted armour or sheath, or run within carthed wiring systems, or otherwise protective devices: (433.1; 533.2.1) 5.1 Concealed cables incorporating carted armour or sheath, or run within carthed wiring systems, or otherwise protective devices: type and nature of the installation and external influences (section 522) 5.10 Concealed cables incorporating carthed arm	Outco	imes		Not Applicable: N/A
Auto- anacceptable thermal damage, arcing or overheating (411.3.2; 411.4; 411.5; 411.6; Sections 432, 433) Alia Single-pole switching or protective devices in line conductor only (132.14.1; 530.3.3) Protection against mechanical damage where cables enter the consumer unit or distribution board (32.14.1; 522.8.1; 522.8.5; 522.8.11) Protection against technagentic effects where cables enter consumer unit or distribution board / emolosurus (521.5.1) BCD(e) provided for fault protection – includes RCBOs (411.4.204; 411.5.2; 531.2) 4.20 Confirmation of indication that SPD is functional (651.4) Application of indication that SPD is functional (651.4) Acceptable and a secure (526.1) Adequate arrangements where a generating set operates as a switched alternative to the public supply (551.6) N/A Adequate arrangements where a generating set operates as a switched alternative to the public supply (551.7) N/A FINAL CIRCUITS Identification of conductors (514.3.1) Cables correctly supported throughout their run (521.10.202; 522.8.5) Condition of the insulation of live parts (416.1) Adequacy of cables protected by enclosure in conduit, ducting or trunking (521.10.1) To include the integrity of conduit and trunking systems (metallic and plastic) Adequacy of cables for current—carrying capacity with regard for the type and nature of installation (323) Adequacy of protective devices: type and rated current for fault protection (411.3) Presence and adequacy of circuit protective conductors (411.3.1; Section 543) Wiring system(s) appropriate for the type and nature of the installation and external influences (section 522) Concealed cables incorporating earthed armour or sheath, or run within earthed wirings styren, or otherwise protection of additional requirements for protection by RCD not exceeding 30 mA For all socket-outlets of rating 32 A or less, unless an exception is permitted (411.3.3) For cables concealed in walls / artificinos containing metal parts regardless of depth (522.6.203) Final circui	ITEM	DESCRIPTION	(Use codes above. where appropriate. 5.13 Provision of fire barriers, sealing arrangements and protection against thermal effects (Section 527) 5.14 Band II cables segregated or separated from Band I cables (528.1)	*	For cables concealed in walls/partitions containing metal parts regardless of depth (522.6.203)		✓
5.14 Band II cables segregated or separated from Band I cables (528.1)	*	Final circuits supplying luminaires within domestic (household) premises (411.3.4)		✓
	5.13	Provision of fire barriers, sealing arrangements and protection against thermal effects (Section 527)		✓
5.15 Cables segregated or separated from communication cabling (528.2)	5.14	Band II cables segregated or separated from Band I cables (528.1)		✓
	5.15	Cables segregated or separated from communication cabling (528.2)		✓
5.16 Cables segregated or separated from non-electrical services (528.3) ✓	5.16	Cables segregated or separated from non-electrical services (528.3)		✓

N. INSPECTION SCHEDULE FOR A DISTRIBUTION BOARD INSTALLATION													
Outco	mes	Acceptable Condition √		Unacceptable condition C1 or	C2	Improvement recommended C3		Further investigation: FI		Not Verified: NV	Limitation: LIM	Not Applicable: N/A	
ITEM								OUTCOME (Use codes above. Provide additional comment where appropriate. C1, C2, C3 and FI coded items to be recorded in Section K of the Condition Report)					
5.17	Termination of cables at enclosures – indicate extent of sampling in Section D of the report (Section 526)												
*	Conn	ections sour	ndly n	nade and und	er no und	ue strain (526.6)					✓		
*	No ba	asic insulatio	n of a	conductor vi	sible outs	side enclosure (526	6.8)						
*	Conn	ections of liv	e cor	iductors adec	juately en	closed (526.5)						✓	
*	Adeq	uately conne	ected	at the point o	f entry to	enclosure (glands	, bush	es etc) (522.8.5)			✓	
5.18	Cond	ition of acce	ssori	es including s	ocket-ou	tlets, switches and	joint	boxes (651.2(v))				C3	
5.19	Suita	bility of acce	essori	es for externa	l influenc	es (512.2)						✓	
5.20	Adec	uacy of wor	king s	pace/access	ibility to e	quipment (132.12;	513.1)				✓	
5.21	1 Single-pole switching or protective devices in line conductors only (132.14.1, 530.3.2)										✓		
6.0	0 LOCATION(S) CONTAINING A BATH OR SHOWER												
6.1	Addit	ional protec	tion f	or all low volta	ge (LV) c	ircuits by RCD not	excee	eding 30 mA (701	1.411	.3.3)		✓	
6.2	Wher	e used as a p	orote	ctive measure	, requiren	nents for SELV or P	ELV n	net (701.414.4.5))			✓	
6.3	Shav	er sockets co	omply	with BS EN 6	1558-2-	5 or BS 3535 (701.	512.3)				N/A	
6.4	Prese	ence of supp	lemei	ntary bonding	conducto	ors, unless not requ	uired l	oy BS 7671:2018	(701	.415.2)		C3	
6.5	Low voltage (e.g. 230 volt) socket-outlets sited at least 3 m from zone 1 (701.512.3)									✓			
6.6	Suitability of equipment for external influences for installed location in terms of IP rating (701.512.2)							01.512.2)		✓			
6.7	Suitability of equipment for installation in a particular zone (701.512.3)									✓			
6.8	Suitability of current-using equipment for particular position within the location (701.55)									✓			
7.0	ОТНЕ	R PART 7 SP	PECIA	L INSTALLATI	ONS OR L	LOCATIONS							
7.1		II other spec		tallations or l	ocations	present, if any (*Re	ecord	separately the re	sults	of particular		N/A	
*Speci	*Special installations or locations present, if any. Details of circuits and/or installed equipment vulnerable to damage when testing and/or remarks												

We would advise the the plastic consumer unit is changed to a metal type to comply with current IEE Wiring Regulations & potential fire risks related to the IP rating of the consumer unit.

CONDITION REPORT GUIDANCE FOR RECIPIENTS

(to be appended to the report)

This report is an important and valuable document which should be retained for future reference

Notes for the person producing the report

- 1 The purpose of this Condition Report is to confirm, so far as reasonably practicable, whether or not the electrical installation is in a satisfactory condition for continued service (see Section E). It should not be used for the replacement of a consumer unit/distribution board. The Report should identify any damage, deterioration, defects and/or conditions which may give rise to danger (see Section K).
- 2 The person ordering the Report should have received the "original" Report and the inspector should have retained a duplicate.
- 3 The Report should be retained in a safe place and be made available to any person inspecting or undertaking work on the electrical installation in the future. If the property is vacated, this Report will provide the new owner/occupier with details of the condition of the electrical installation at the time the Report was issued.
- 4 Where the installation incorporates a residual current device (RCD) there should be a notice at or near the device stating that it should be tested six monthly. For safety reasons it is important that this instruction is followed.
- 5 Section D (Extent and Limitations) should identify fully the extent of the installation covered by this Report and any limitations on the inspection and testing. The inspector should have agreed these aspects with the person ordering the Report and with other interested parties (licensing authority, insurance company, mortgage provider and the like) before the inspection was carried out.
- 6 Some operational limitations such as inability to gain access to parts of the installation or an item of equipment may have been encountered during the inspection. The inspector should have noted these in Section D.
- 7 For items classified in Section K as C1 ("Danger present"), the safety of those using the installation is at risk, and it is recommended that a skilled person competent in electrical installation work undertakes the necessary remedial work immediately.
- 8 For items classified in Section K as C2 ("Potentially dangerous"), the safety of those using the installation may be at risk and it is recommended that a skilled person competent in electrical installation work undertakes the necessary remedial work as a matter of urgency.
- 9 Where it has been stated in Section K that an observation requires further investigation (code FI) the inspection has revealed an apparent deficiency which may result in a code C1 or C2, and could not, due to the extent or limitations of the inspection, be fully identified. Such observations should be investigated without delay. A further examination of the installation will be necessary, to determine the nature and extent of the apparent deficiency (see Section F).
- 10 For safety reasons, the electrical installation should be re-inspected at appropriate intervals by a skilled person or persons, competent in such work. The recommended date by which the next inspection is due is stated in Section F of the Report under 'Recommendations' and on a label at or near to the consumer unit/distribution board. It is recommended that a competent person undertakes the necessary remedial work immediately.
- 11 Any deficiencies with intake equipment should be reported to the person ordering the work
